PROFESSIONAL PROFILE

Cloud Engineer with a background in Go development and a deep understanding of cloud ecosystems (AWS, GCP, Azure). Specializing in service deployment automation, cloud infrastructure cost optimization, and ensuring system fault tolerance. Focused on implementing Infrastructure as Code (IaC) and CI/CD best practices.

TECHNICAL SKILLS

- **Cloud Platforms:** Amazon Web Services (Primary), Google Cloud Platform, Microsoft Azure.
- **Infrastructure as Code:** Terraform, OpenTofu.
- **Containerization & Orchestration:** Docker, Kubernetes (EKS, GKE).
- **CI/CD Systems:** GitHub Actions, GitLab CI.
- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack.
- **Backend & Scripting:** Golang, Bash, gRPC, SQL.

PROFESSIONAL EXPERIENCE

Cloud / DevOps Engineer | WebRoom *January 2024 - Present*

- Responsible for platform stability and 24/7 availability.
- Implemented a centralized logging system and infrastructure metrics visualization.
- Optimized AWS costs by migrating to Spot Instances and utilizing Reserved Instances, significantly reducing operational expenses.

Cloud / DevOps Engineer | ZipZip *October 2025 - Present*

- Built a secure online file archiver using WebAssembly (WASM) and Astro, enabling 100% client-side processing.
- Reduced infrastructure overhead by eliminating the need for server-side file uploads and compute processing.
- Automated static site deployment via GitHub Actions to cloud storage buckets (S3/GCP) with CDN integration for global low-latency access.

DevOps / Backend Developer | Tikecto Web *February 2023 - June 2023*

- Designed microservices architecture for a ticketing system and ensured full containerization.
- Configured high-performance service communication using gRPC.
- Implemented a message queue system based on RabbitMQ for reliable processing of high-volume orders during peak loads.

KEY ACHIEVEMENTS

- **Infrastructure Automation:** Fully automated the creation of identical environments (Dev/Staging/Prod) using Terraform, minimizing the risk of human error.
- **Code Delivery Optimization:** Configured GitHub Actions for a full cycle of testing and deployment, reducing time-to-market for new features.
- **Scaling Strategy Implementation:** Set up auto-scaling mechanisms (Auto-scaling groups), allowing the system to adapt to traffic changes without manual intervention.

EDUCATION & CERTIFICATION

- **National Technical University of Ukraine "Kyiv Polytechnic Institute"** (2024 - 2028) Bachelor of Information Systems and Technologies.
- **Udemy Certificate:** Backend Engineering with Go & Cloud Computing.

ADDITIONAL INFORMATION

- **Languages:** English (Upper-Intermediate), Ukrainian (Native).
- **Competencies:** Rapidly mastering new technologies, strong teamwork skills within Agile/Scrum frameworks.
